

Implementation of GENIUS results to Lovisa Gymnasium

The Erasmus+ Genius project will be implemented as follows in Lovisa Gymnasium.

ENA6 is a course where students prepare themselves for working life as well as future studies. We concentrate on vocabulary concerning economical questions and the challenges of future professions.

Our Erasmus+ project plans are used as examples of what to think about when starting up a project or business plan. Firstly, by reviewing the projects, our third-year students can easily detail the efforts made in outlining the strengths and challenges a new business has to deal with. Secondly, the careful planning of the economy is a necessity for any starting business, which was also one of the key questions in the projects. Last but not least, the efforts made by students in Genius are definite reminders for our students that it's not always easy to find a niche and lucrative business in the national, European or global economy.

The challenges, possibilities and necessary steps in becoming an entrepreneur are clearly visible in the projects made over the years of the Genius project.
